WORK EXPERIENCE

SOFTWARE ENGINEER (DEVELOPMENT UNIT)

September 2025 – Present | OJ Solutions Ltd

Designed and delivered a backend system for a workforce management platform, covering recruitment, scheduling, availability, reporting, and payroll workflows.

Implemented business logic and APIs using Laravel (PHP) and MySQL, translating real operational requirements into reliable, maintainable software.

Took ownership of features from requirements through deployment, working directly with stakeholders and resolving production issues.

SOFTWARE ENGINEER (REMITTANCE TEAM)

December 2024 - | Flutterwave

Designed and maintained backend services powering transfer operations, ensuring scalability and secure data handling.

Owned the end-to-end development (frontend and backend) of an internal dashboard exposing live operational metrics for the Send app, supporting performance monitoring for a consumer application serving millions of users.

Designed and integrated APIs across internal and external systems, enabling reliable event-driven workflows, data ingestion, and cloud-based deployments.

BACKEND DEVELOPER (API UNIT)

June 2024 – January 2025 | Guaranty Trust Bank (GTCO)

Contributed to a large-scale core banking migration project (BASIS to FINACLE), optimizing backend processes to improve efficiency and reduce operational delays.

Designed and deployed APIs for currency conversion, supporting versioning, caching, and high-volume traffic.

Integrated APIs with monitoring and logging tools to support performance tracking and incident resolution.

FULLSTACK DEVELOPER

January 2023 – July 2023 | Precise Financial Systems (PFS)

Contributed to a multi-tenant SaaS API platform, enabling multiple businesses to operate within a single application.

Conducted unit testing and documentation of backend services.

Built and maintained UI components in React, including micro-frontends for independent feature deployment.

BACKEND DEVELOPER (APPLICATION DEVELOPMENT UNIT)

January 2023 – June 2023 | Access Bank Digital Factory (DIG)

Developed REST APIs in ASP.NET Core and C#, applying clean architecture principles for scalability.

Implemented authentication and authorization with ASP.NET Core Identity and JWT.

Partnered with HR on a KPI migration project, automating performance tracking by moving from legacy systems to Microsoft Dynamics 365, reducing reporting time by 60%.

FULLSTACK DEVELOPER

May 2022- October 2022 | Ace Mall Limited

Developed and deployed the company website, improving the organization's online presence and accessibility.

Built responsive user interfaces and integrated backend services to support dynamic content and user interactions.

Implemented RESTful API integrations to connect frontend components with backend data services.

ACTIVITIES

Social Committee Member | Babcock University – Organized events, managed logistics, and facilitated networking between students and industry professionals.

Project Lead (EduPortal – Online Learning Platform) | Babcock University – Defined scope, led a development team, managed milestones, and maintained project documentation.

TECHNICAL SKILLS

Languages & Frameworks: C#, PHP (Laravel), SQL, JavaScript/TypeScript

Cloud & DevOps: AWS (Lambda, S3, API Gateway), Docker, CI/CD pipelines exposure

Databases: MySQL, PostgreSQL, SQL Server

Backend & APIs: RESTful API design, authentication & authorization

Software Practices: Testing (unit & integration), production debugging

EDUCATION

BSc Software Engineering (Second Class Upper) | Babcock University
